**Subject: Updated risk minimisation materials for physicians and for patients**

Dear Doctor,

This letter is to inform you about some updates made to the educational material for Siklos®.

These updates mainly rely on the fact that the previous round tablet of Siklos® 100 mg is now breakable into 2 equal parts. By the way, the tablet of Siklos® 1000 mg is now engraved too so as to avoid any confusion between the two strength. See below detailed changes:

- **Siklos® 100 mg** has been replaced by an oblong tablet with half-scoring on both sides. The composition and the manufacturing process remain unchanged, but the tablets can now be divided into two equal parts as shown in the picture below.

- **Siklos® 1000 mg** tablets are now engraved "T1T1" on one side to reinforce their identification as shown in the picture below.

A copy of the updated guides is attached. Further copies are available for downloading and printing on our website: <http://www.siklos.eu/uk>

In case you need paper copies of these guides, please fill the on-line questionnaire available on our web site.

For further questions, please send an email to: [question@addmedica.com](mailto:question@addmedica.com).

Wishing you a good reception of these information, we remain at your disposal for any questions.

  
Isabelle DUPUIS
